HOW TO IDENTIFY

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

WHERE & WHEN

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

EAT?

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

CAUTIONS

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations

across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

TOXIC SPECIES 17

Genus species 17 | TOXIC

cap detail
stem cross-section
pg. 17

⚠ TOXIC — DO NOT EAT *The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.*

WHAT IT IS

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

HOW TO IDENTIFY

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

WHERE & WHEN

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

EAT?

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.

CAUTIONS

The variations across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists. The variations

across this region are documented in field notes spanning decades, gathered by hand across thousands of acres of mixed terrain and recorded with the patience of expedition naturalists.
